Ambassador Kenneth M. Quinn President The World Food Prize Foundation 666 Grand Ave, Ste 1700 Des Moines, IA 50309

## Dear Ambassador Quinn:

We are writing to commend you and the World Food Prize Foundation on the theme of this year's World Food Prize, "The Next Borlaug Century: Biotechnology, Sustainability and Climate Volatility." The World Food Prize Foundation's unwavering support of science and its application to agriculture will have a profound impact on global food security in the years ahead.

This year, in recognizing three pioneers of modern agricultural biotechnology, Marc Van Montagu, Mary-Dell Chilton and Robert Fraley, the Foundation affirms the determinations made around the world by prominent scientists and organizations, including the United Nations, the World Health Organization, the American Medical Association and the U.S. National Academy of Sciences, that biotechnology is a safe and critical tool of modern agriculture.

Feeding a world population of nine billion people by 2050 in the face of increasingly severe weather and environmental conditions simply cannot be done without the full benefit of modern science and biotechnology. The genetically modified seeds that are being released today produce higher yields while using less water and fewer inputs, thus promoting sustainability by placing fewer burdens on the environment. These seeds are critical tools in meeting the challenges of global food security and climate volatility.

Thank you very much for entering this important discussion.

Sincerely,
